

# Freefall / Limbo

Designed by David Mitchell

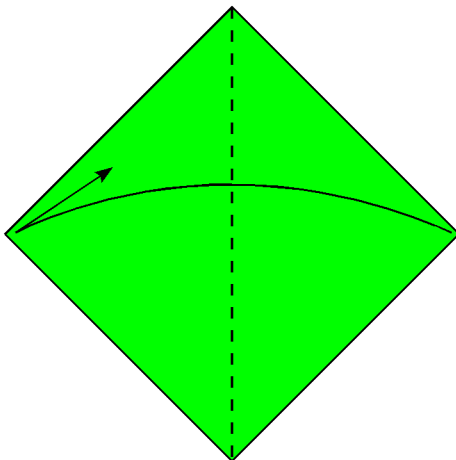

Freefall /Limbo is a simple double image design. Viewed one way up it is a skydiver in freefall. Viewed the other way up it is a limbo dancer.

Freefall / Limbo was designed in 2000.

You will need a single square of irogami. Begin with your paper arranged coloured side up.

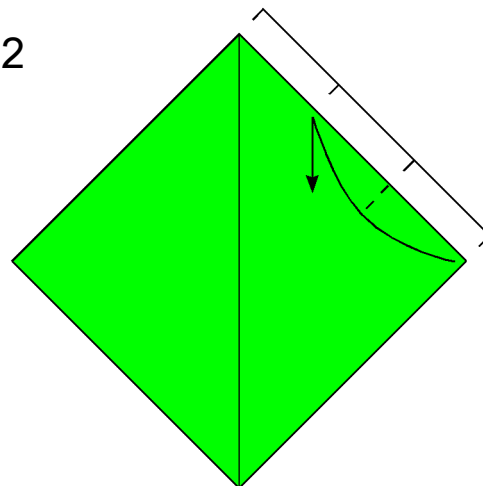

1

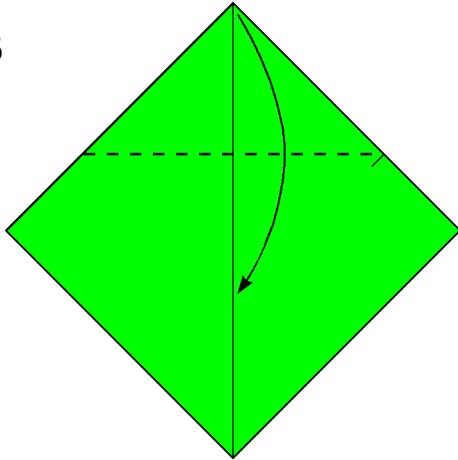

1. Fold in half sideways, then unfold.

2

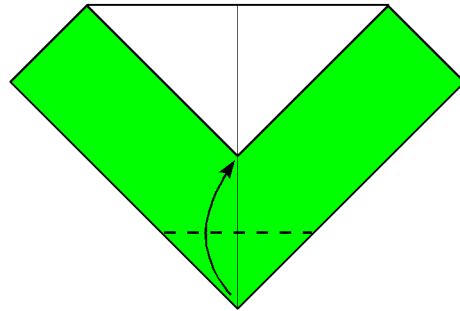

2. Make a tiny crease to mark a point two thirds of the way down the sloping right hand edge.

3

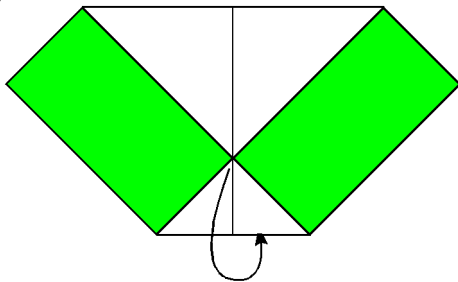

3. Fold the top corner downwards onto the vertical crease using the tiny crease made in step 2 to locate the right hand end of the crease.

4

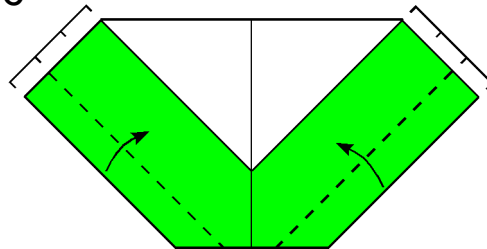

4. Fold the bottom corner upwards so that the points of the two white triangles touch each other.

5

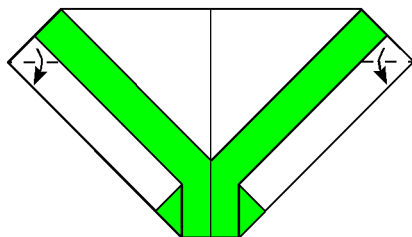

5. Swing the bottom flap backwards out of sight using the existing crease.

6

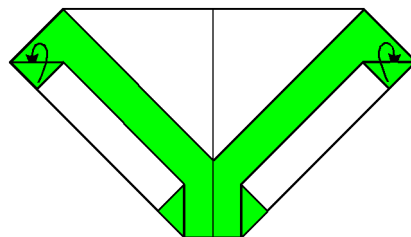

6. Fold both the bottom sloping edges inwards. Try to make your design look like picture 7.

7

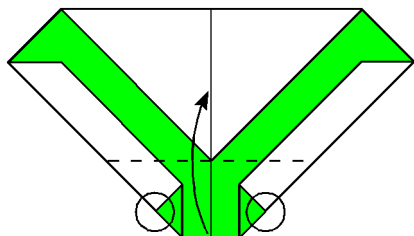

7. Fold the corners of the new front flaps downwards.

8

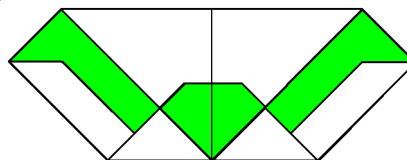

8. Swing both these new flaps backwards out of sight using the existing creases.

9

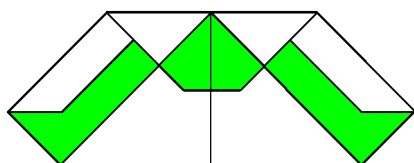

9. Fold the bottom upwards so that the edges of the coloured areas line up in the way shown in picture 10.

10

10. Freefall is finished. Turn her upside down and ...

11

11. ... she becomes a Limbo dancer! Both versions will stand on a flat surface if folded slightly backwards along the line of the vertical centre crease.
